

Build a Competitor-Informed Marketing Page in Lovable

Use real pricing pages, find the market pattern, and launch a polished product page - without coding.

Outcome: one Lovable marketing page + one reusable product-positioning template

Start Here

In this lab, you will build a marketing page for a fictional product called CampusFlow. CampusFlow is an AI-friendly study planner for college students. You will study three public competitor pricing pages, paste the important pricing-page text into Lovable, and ask Lovable to synthesize an original product offer and landing page. The goal is not to copy competitors. The goal is to understand what the market values and then position our own product clearly.

Look at it this way...

A pricing page is like a menu. It tells us what the company thinks customers will pay for: plan names, premium features, usage limits, trust signals, and upgrade triggers. We are using that public information to learn positioning - not to copy text, logos, design, or claims.

Page to open	URL
Lovable sign-up / start page	https://lovable.dev/
Lovable free plan / pricing page	https://lovable.dev/pricing
Competitor 1: Notion pricing	https://www.notion.com/pricing
Competitor 2: Todoist pricing	https://www.todoist.com/pricing
Competitor 3: Trello pricing	https://trello.com/pricing

What You Are Building

- A product marketing page for CampusFlow, a fictional student productivity product.
- A competitor-informed feature set inspired by Notion, Todoist, and Trello pricing pages.
- A clean product offer with benefits, tiers, feature cards, and a call-to-action.
- A reusable template you can later adapt for perfume, shoes, electric bikes, tutoring, meal prep, skincare, fitness, or any other product.

Time estimate

45-60 minutes. Move fast. This is a marketing-productivity lab, not a research paper. If a page is hard to copy, grab the plan names, prices, and 6-10 most visible features per plan and keep going.

Part 1 - Create Your Lovable Account

1. Go to : <https://lovable.dev/> and create a free account. Easiest with the Google button.
2. Use only classroom-safe information. Do not enter private API keys, student IDs, home addresses, or financial information.
 - If Lovable asks you to upgrade, stop. Stay on the free tier for this lab.
 - If you run out of credits, submit a screenshot of what you built so far.
3. After logging in, look for a button such as New project, Create, Start building, or the main prompt box. The exact label can change, but the goal is simple: get to the big box where you describe what you want Lovable to build.
4. Do not connect GitHub, Supabase, Stripe, or any API keys for this lab. We are building a public-facing marketing page only.
5. If Lovable asks whether you want a blank project or to start from a prompt, choose the prompt option.

Part 2 - Collect Competitor Pricing Page Text

Important: copy only what you need

Do not paste entire websites into Lovable. Copy the useful pricing-card content: plan names, short descriptions, prices if visible, feature bullets, limits, premium upgrades, and trust language. About 500-1,000 words per competitor is plenty.

1. **Open three browser tabs:** Open Notion pricing, Todoist pricing, and Trello pricing using the links above.
2. **Copy Notion pricing text:** Select the visible plan cards and feature bullets. Copy plan names, who each plan is for, prices if visible, and the main feature bullets.
3. **Copy Todoist pricing text:** Repeat the same process. Focus on the Free, Pro, and Business-style plans and the features that appear to justify upgrading.
4. **Copy Trello pricing text:** Repeat the same process. Focus on Free, Standard, Premium, and Enterprise-style differences.
5. **Keep a scratchpad:** Paste each competitor into a temporary document or notes window under three labels: NOTION, TODOIST, TRELLO. You will paste those blocks into the Lovable prompt next.

Part 3 - Paste This Prompt into Lovable

Copy from BEGIN PROMPT to END PROMPT

The next box is intentionally long. That is okay. You are giving Lovable the job, the source material, the ethical rules, and the exact page you want built.

COPY / PASTE INTO LOVABLE

BEGIN PROMPT

Build a polished one-page marketing website for a fictional student productivity product called CampusFlow.

CampusFlow is an AI-friendly study planner for college students. It helps students organize assignments, due dates, projects, study sessions, and personal tasks in one simple place.

Your job has TWO parts:

PART A - Analyze the competitor pricing-page text that I paste below.

Use it to identify:

- Common features across the market
- Premium features that appear in paid tiers
- Upgrade triggers that make users pay
- Benefit language that customers seem to care about
- Gaps or opportunities where CampusFlow could feel different

PART B - Build an original marketing landing page for CampusFlow.

The page should include:

1. A strong hero section with a headline, subheadline, and call-to-action button
2. A problem section that describes why students struggle with assignments and deadlines
3. A feature section with 6 feature cards
4. A "Why CampusFlow is different" section
5. A simple pricing/tier section with three original tiers:
 - Starter
 - Student Pro
 - Study Squad
6. A comparison-inspired section that says what CampusFlow learned from the market without naming or attacking competitors
7. A short testimonial-style section using clearly fictional student quotes
8. A final call-to-action section

Design requirements:

- Make it modern, colorful, clean, and student-friendly
- Use a visual style suitable for college students
- Include cards, icons, sections, and clear spacing
- Make it look like a real product page, not a plain document
- Make the page responsive if possible
- Keep all wording original

Ethics and originality rules:

- Do not copy exact competitor wording
- Do not use competitor logos
- Do not claim CampusFlow has features that are impossible or unsafe
- Do not attack competitors
- Do not use fake real-person testimonials; if testimonials are included, label them as example student quotes or make them obviously fictional

- Use competitor pages only as inspiration for market patterns

Here is our own product idea:

Product name: CampusFlow

Audience: college students

Main problem: students are overwhelmed by assignments, group work, exams, due dates, and scattered notes

Promise: CampusFlow helps students see what matters next and stay ahead without needing a complicated project management tool

Tone: energetic, helpful, student-friendly, confident, not corporate

COMPETITOR PRICING PAGE TEXT 1 - NOTION:

[PASTE NOTION PRICING PAGE TEXT HERE]

COMPETITOR PRICING PAGE TEXT 2 - TODOIST:

[PASTE TODOIST PRICING PAGE TEXT HERE]

COMPETITOR PRICING PAGE TEXT 3 - TRELLO:

[PASTE TRELLO PRICING PAGE TEXT HERE]

Before building the page, briefly summarize the market pattern you found in 5 bullets. Then build the page.

END PROMPT

Part 4 - Wait, Preview, and Test

1. After you paste the prompt, click the send/arrow button in Lovable.
2. Wait while Lovable analyzes the source material and builds the page. This may take a few minutes.
3. When Lovable shows the preview, click through the page from top to bottom.
4. Check whether the page has all required sections: hero, problem, features, differentiation, pricing tiers, comparison-inspired section, testimonials, and final CTA.
5. If something is missing, do not restart. Use a small follow-up prompt to fix only that issue.

FOLLOW-UP PROMPT IF PRICING TIERS ARE WEAK

Improve the CampusFlow page.

Please make the pricing/tier section clearer and more visually attractive.

Each tier should have:

- Tier name
- Who it is for
- 4-6 feature bullets
- A short upgrade reason
- A call-to-action button

Keep the design student-friendly and original.

FOLLOW-UP PROMPT IF THE PAGE SOUNDS GENERIC

Improve the CampusFlow page.

Make the hero section more exciting and more specific to college students.

Avoid generic wording like "increase productivity."

Focus on assignments, deadlines, projects, exams, and the feeling of staying ahead.

Give me 3 headline options and then apply the best one to the page.

FOLLOW-UP PROMPT FOR ETHICS / ORIGINALITY SECTION

Improve the CampusFlow page.

Add a new section called "Built from market patterns, not copied from competitors."

Explain in simple student-friendly language that CampusFlow was designed after studying common productivity app tiers, but that the offer, wording, and design are original.

Keep the section short and professional.

Part 5 - Publish or Share Your Preview

- 1. Look for a Share, Publish, or Preview/share button in Lovable.
- 2. If Lovable lets you publish, copy the public URL.
- 3. If publishing is not available on your free account, copy the preview link or take screenshots of the finished page.
- 4. Submit your link or screenshot according to your LMS.

Part 6 - Quick Marketing Review

Question	Your answer
What is CampusFlow’s main promise?	
Which competitor-inspired feature pattern did Lovable use well?	
Which part of the page feels most persuasive?	
Which sentence still sounds generic and should be rewritten?	
What should CampusFlow avoid copying from competitors?	

Extra Credit - Reuse the Template for Your Own Product

Pick your own product

Now repeat the same idea with any product you care about: perfume, shoes, electric bikes, tutoring, skincare, meal prep, fitness, pet care, coffee, clothing, music lessons, or a campus club service. The goal is to reuse the thinking pattern, not the CampusFlow content.

Extra Credit Step A - Choose Your Product and Competitors

Your product category	Example competitors	What to copy from pricing/tier pages
Perfume / fragrance	Dossier, Scentbird, Sephora fragrance sets	Plans, scent discovery, subscriptions, gift bundles
Shoes / sneakers	Nike, Allbirds, On, Hoka	Product benefits, comfort claims, materials, membership perks
Electric bike	Rad Power Bikes, Aventon, Lectric	Models, warranty, range, financing, accessories
Meal prep service	Factor, HelloFresh, Blue Apron	Plan sizes, meals per week, dietary filters, discounts
Fitness app	Strava, MyFitnessPal, Fitbod	Free vs premium features, coaching, analytics, community

EXTRA CREDIT COPY / PASTE TEMPLATE

BEGIN EXTRA CREDIT PROMPT

Build a polished one-page marketing website for my product using competitor pricing-page research.

My product:

Product name: [YOUR PRODUCT NAME]

Product category: [PERFUME / SHOES / ELECTRIC BIKE / MEAL PREP / FITNESS APP / OTHER]

Target customer: [WHO IS THIS FOR?]

Main customer problem: [WHAT PROBLEM DOES IT SOLVE?]

Product promise: [WHAT BENEFIT DOES IT DELIVER?]

Tone: [FUN / PREMIUM / BOLD / FRIENDLY / LUXURY / STUDENT-FRIENDLY / OTHER]

Your job:

1. Analyze the three competitor pricing-page text blocks below.
2. Identify common features, premium features, customer benefits, upgrade triggers, and market gaps.
3. Build an original marketing page for my product.
4. Include a hero section, problem section, feature cards, product tiers or bundles, a comparison-inspired section, and a call-to-action.
5. Do not copy exact wording, logos, testimonials, design, or brand claims from competitors.

COMPETITOR 2 PRICING/TIER PAGE TEXT:

[PASTE TEXT HERE]

COMPETITOR 3 PRICING/TIER PAGE TEXT:

[PASTE TEXT HERE]

Make the final page feel original, polished, and ready to show to a potential customer.

END EXTRA CREDIT PROMPT

The Magic in Marketing

- Pricing pages are a shortcut into market strategy. They reveal what companies believe customers value.
- The most useful information is not the price itself. The most useful information is the packaging: what is free, what is paid, what is premium, and what makes a user upgrade.
- Good marketers do not copy competitors. They learn the category, find the pattern, and then create a sharper offer.
- This lab teaches students to move from “AI makes stuff” to “AI helps me research, position, package, and publish a real product idea.”

Final deliverable: Lovable link or screenshots + completed marketing review table
