

Personal Profile

Build and publish your AI-powered professional profile in one class period

Here is what you will build today

A polished profile

A friendly one-page professional profile about you.

A real public link

A URL you can share with classmates, your professor, or future collaborators.

A semester launch moment

A first-day “I built something with AI” win.

Today is not about learning theory.

Today is about feeling the magic: you give Gamma a little information, Gamma builds a beautiful public profile, and you polish it just enough to make it yours.

Why are we using Gamma today?

There are many exciting AI tools. Later in the semester, we will explore more of them. For Day 1, Gamma is the simplest path from idea to polished web page. It is no-code, visual, beginner-friendly, and designed to create presentations, documents, websites, social posts, and images from prompts.

- ☐ No coding required
- ☐ No installation required
- ☐ Free account path available
- ☐ Works in a browser
- ☐ Can publish a shareable link

Before you paste anything: quick privacy check

Redact before you upload.

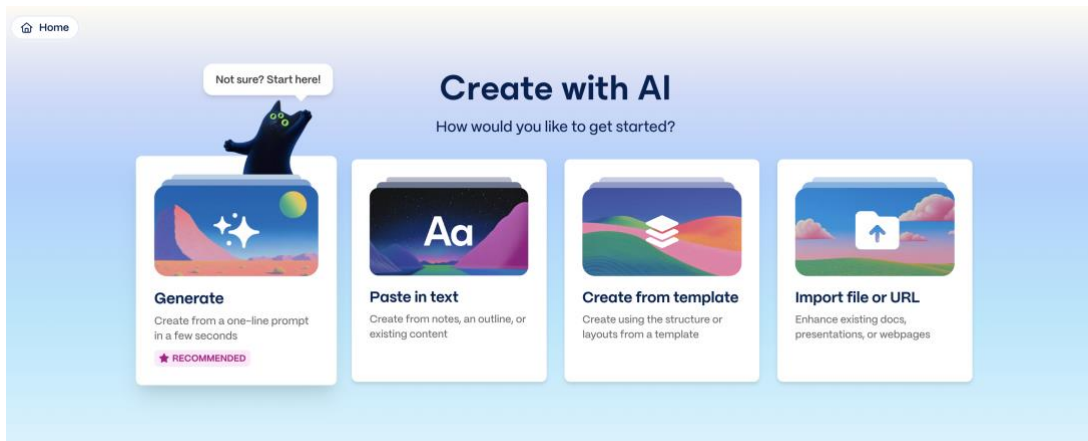

Do not paste your home address, phone number, student ID, personal financial details, private family information, or anything you would not want on a public profile. A resume is useful, but you can delete sensitive lines first.

Choose ONE source. Keep it simple. You do not need a perfect resume to do this lab.

Option A	Paste a resume after removing private details.
Option B	Paste your LinkedIn About section and experience summary (not the URL)
Option C	Use the no-resume starter prompt below.
Option D	Answer the short questions directly inside the Gamma prompt.

Step 1 — Start by creating your account on Gamma

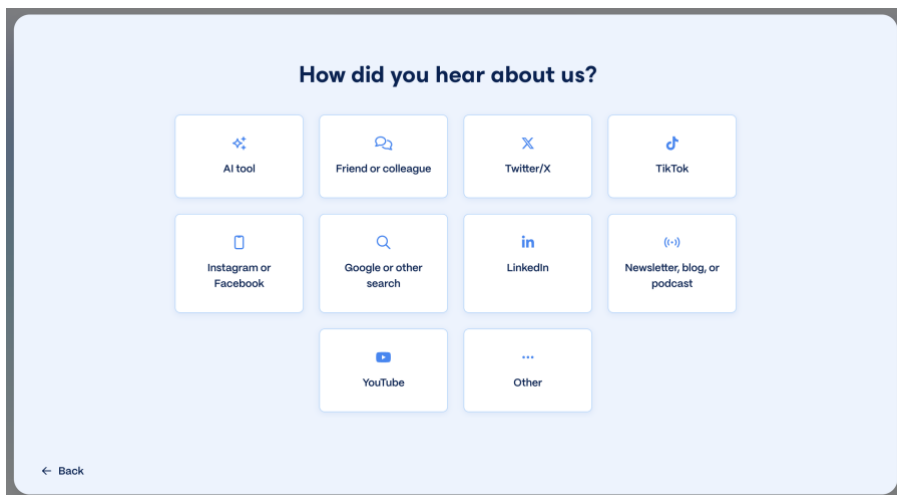

1. Click this link: <https://gamma.app/signup>
Create a free Gamma account, Gmail would do nicely and keep this Word document open beside your browser.
2. Select the first tile, **Generate** (and if you are feeling bold, select another option).

3. Select **Just me**.

4. Can't go wrong here. Make your selection.

Step 2 — Enter the following prompt in the system

Feel free to change any of the prompt features below, or just use it as is. See the screen capture from my example on the next page.

COPY / PASTE INTO GAMMA — Main Profile Website Prompt

Create a polished one-page professional profile website for me.

The page should look modern, friendly, impressive, and easy to read. Make it feel like a clean personal portfolio, not a school worksheet.

Use these sections:

1. My name and professional headline
2. A short About Me section
3. My strengths and skills
4. What I am learning this semester
5. My interests in AI, technology, business, creativity, or problem-solving
6. A small section called “What I hope to build”
7. A simple closing section that says “Let’s connect”

Writing style:

- Warm, confident, and student-friendly
- Professional but not stiff
- Clear and simple
- No exaggeration
- No fake jobs, degrees, awards, certifications, or technical skills

Design style:

- Colorful but polished
- Modern student/professional vibe
- Easy to read on a phone
- Use icons or simple visuals if helpful

Here is my information:

[PASTE YOUR RESUME TEXT, LINKEDIN TEXT, OR ANSWERS HERE]

NO RESUME? COPY / PASTE THIS INSTEAD

Use this information to create my one-page professional profile website.

My name:

My major or program:

Three things I am good at:

One class, project, job, hobby, or life experience I am proud of:

Three topics I am curious about:

One kind of project I would love to build with AI:

The kind of opportunity I may want in the future:

My preferred tone: friendly, professional, beginner-friendly, and confident.

Please turn this into a polished profile page. Do not invent anything. If a section feels missing, write it in a simple student-friendly way.

5. Enter the prompt followed by something about you, resume, blurb, sections from LinkedIn (not the URL).

[illegible]

Step 3 — Create your Gamma profile page

- ☐ Paste the main prompt from this document.
- ☐ Add your resume text, LinkedIn text, or starter answers.
- ☐ Let Gamma **Generate** the page. Do not overthink it. The first version only needs to exist.

Professor tip for students

If Gamma gives you several format choices, choose the one closest to website, webpage, page, or site. If you only see presentation/doc options, choose the most visual option and use Share/Publish at the end.

Step 4 — Make three tiny edits

Do not redesign the whole thing. You are doing a quick polish pass. Make only these three changes:

- ☐ Fix your name and headline.
- ☐ Replace one generic sentence with something that sounds more like you.
- ☐ Choose a color theme, image, icon, or visual style you like.

OPTIONAL POLISH PROMPT — Use inside Gamma if a sentence sounds generic

Please revise this section so it sounds more natural and more like a real student.

Make it warm, confident, and honest. Remove buzzwords and clichés. Do not exaggerate my experience.

Here is the section I want to improve:

[PASTE THE SENTENCE OR SECTION HERE]

Step 5 — Publish and copy your URL

- ☐ Click Share, Publish, or the nearest sharing option.
- ☐ Choose the option that creates a public link.
- ☐ Copy the URL.
- ☐ Open the URL in a new browser tab to make sure it works.
- ☐ Submit the URL where your professor asks you to submit it.

What counts as complete?

You are done when you have a working link to a profile page that includes your name, a short bio, a few skills or strengths, what you are learning, and one thing you hope to build or explore and the link or screen capture of your published page on Brightspace

Step 6 — Quick class share

Pair up with someone nearby. Exchange links. Keep the feedback kind, specific, and quick.

- ☐ One thing I liked about your page is...
- ☐ One sentence that sounded authentic was...
- ☐ One tiny improvement I suggest is...

YOU JUST SHIPPED.

This is the first AI Generalist habit: use AI to create something real, visible, and useful.
